## RESEARCH INTERESTS

I'm currently a Ph.D. student at University of British Columbia (since Fall 2021), advised by Alexander J. Summers and Ivan Beschastnikh. My research interests lie in programming languages, program verification, and type theory. I'm particularly interested in how we can write simple and intuitive specifications about various program properties and prove their correctness.

## RESEARCH EXPERIENCE

2021.9- **Research Assistant, University of British Columbia, Canada**

Now Working on automated verification of liveness guarantees in async runtime systems. Currently I'm focusing on formally verifying certain liveness properties in different Rust async runtime implementations and automating such verification using static analysis.

2020.8- **Research Intern (Remote), Utrecht University, Netherland**

2021.6 Worked with Dr. Jurriaan Hage on the LLVM backend and FFI of a Haskell compiler called Helium.

2018.6- **Research Assistant, Texas A&M University, USA**

2020.6 Worked on static analysis for concurrent programs. Developed tools that scale to million lines of Java/C++/Android code and efficiently detect potential data races and deadlocks.

## WORK EXPERIENCE

2019.7- **Software Engineer, Coderrect Inc., USA**

2021.5 (As intern during 2019.7-8, 2020.2-7, as full-time employee during 2020.10-2021.5)  
Worked as the main developer of an LLVM-based program analysis tool for detecting concurrency bugs and anti-patterns in C/C++/Fortran/CUDA code. I designed a highly efficient static happens-before graph, lock tracking algorithm and race detection algorithm which enable the tool to analyze million lines of code in minutes accurately.

2015.11- **Software Engineer, Nightingale Technology, China**

2017.4 Worked on a second-hand commodities trading platform for college students and an integrated web application for editing and publishing news articles as well as managing and visualizing their statistics.
